

ESTADO GENERAL

La borrasca de las islas Británicas se aleja por el N. y sus últimos efectos se sienten todavía en las costas de Cantabria y de Galicia. Una depresión importante por la rapidez con que se ha presentado en las Azores, donde ha hecho bajar el barómetro 10^{mm}, vuelve a amenazar la región occidental de la Península. En esta el tiempo aunque algo mejor ha permanecido lluvioso en algunos puntos. Las presiones más elevadas se extienden desde Castilla hasta Madera. Sube la temperatura.

Tiempo probable

| | |
|------------|--|
| EN EL N | vientos bonancibles del 3.º cuadrante y lluvias. |
| " " " " | id id id id id id. |
| " " N.W | id flojos y bonancibles variables y buen tiempo. |
| " " CENTRO | id bonancibles del E. y buen tiempo. |
| " " S | como para el Centro. |
| " " E | vientos bonancibles de la región del N. y lluvias. |
| " " NE | |
