Signos convencionales

| Fuerza del viento | Cielo | Mar |
|---------------------------|-------------|-----------------|
| 0 Calma | ○ Despejado | Llana |
| 1 Ventolina | ○ Con nubes | Rixada |
| 2 Muy flojo | ○ Bruña | Marejada |
| 3 Flojo | ○ Niebla | Picada |
| 4 Bonancible (Moderado) | ○ Nieve | Marejada gruesa |
| 5 Fresquito (Algo fuerte) | ● Lluvia | Gruesa |
| 6 Fresco (Fuerte) | ⚡ Tormenta | Muy gruesa |
| 7 Duro | | Arbolada |
| 8 Muy duro | | Muy arbolada |
| 9 Temporal | | |

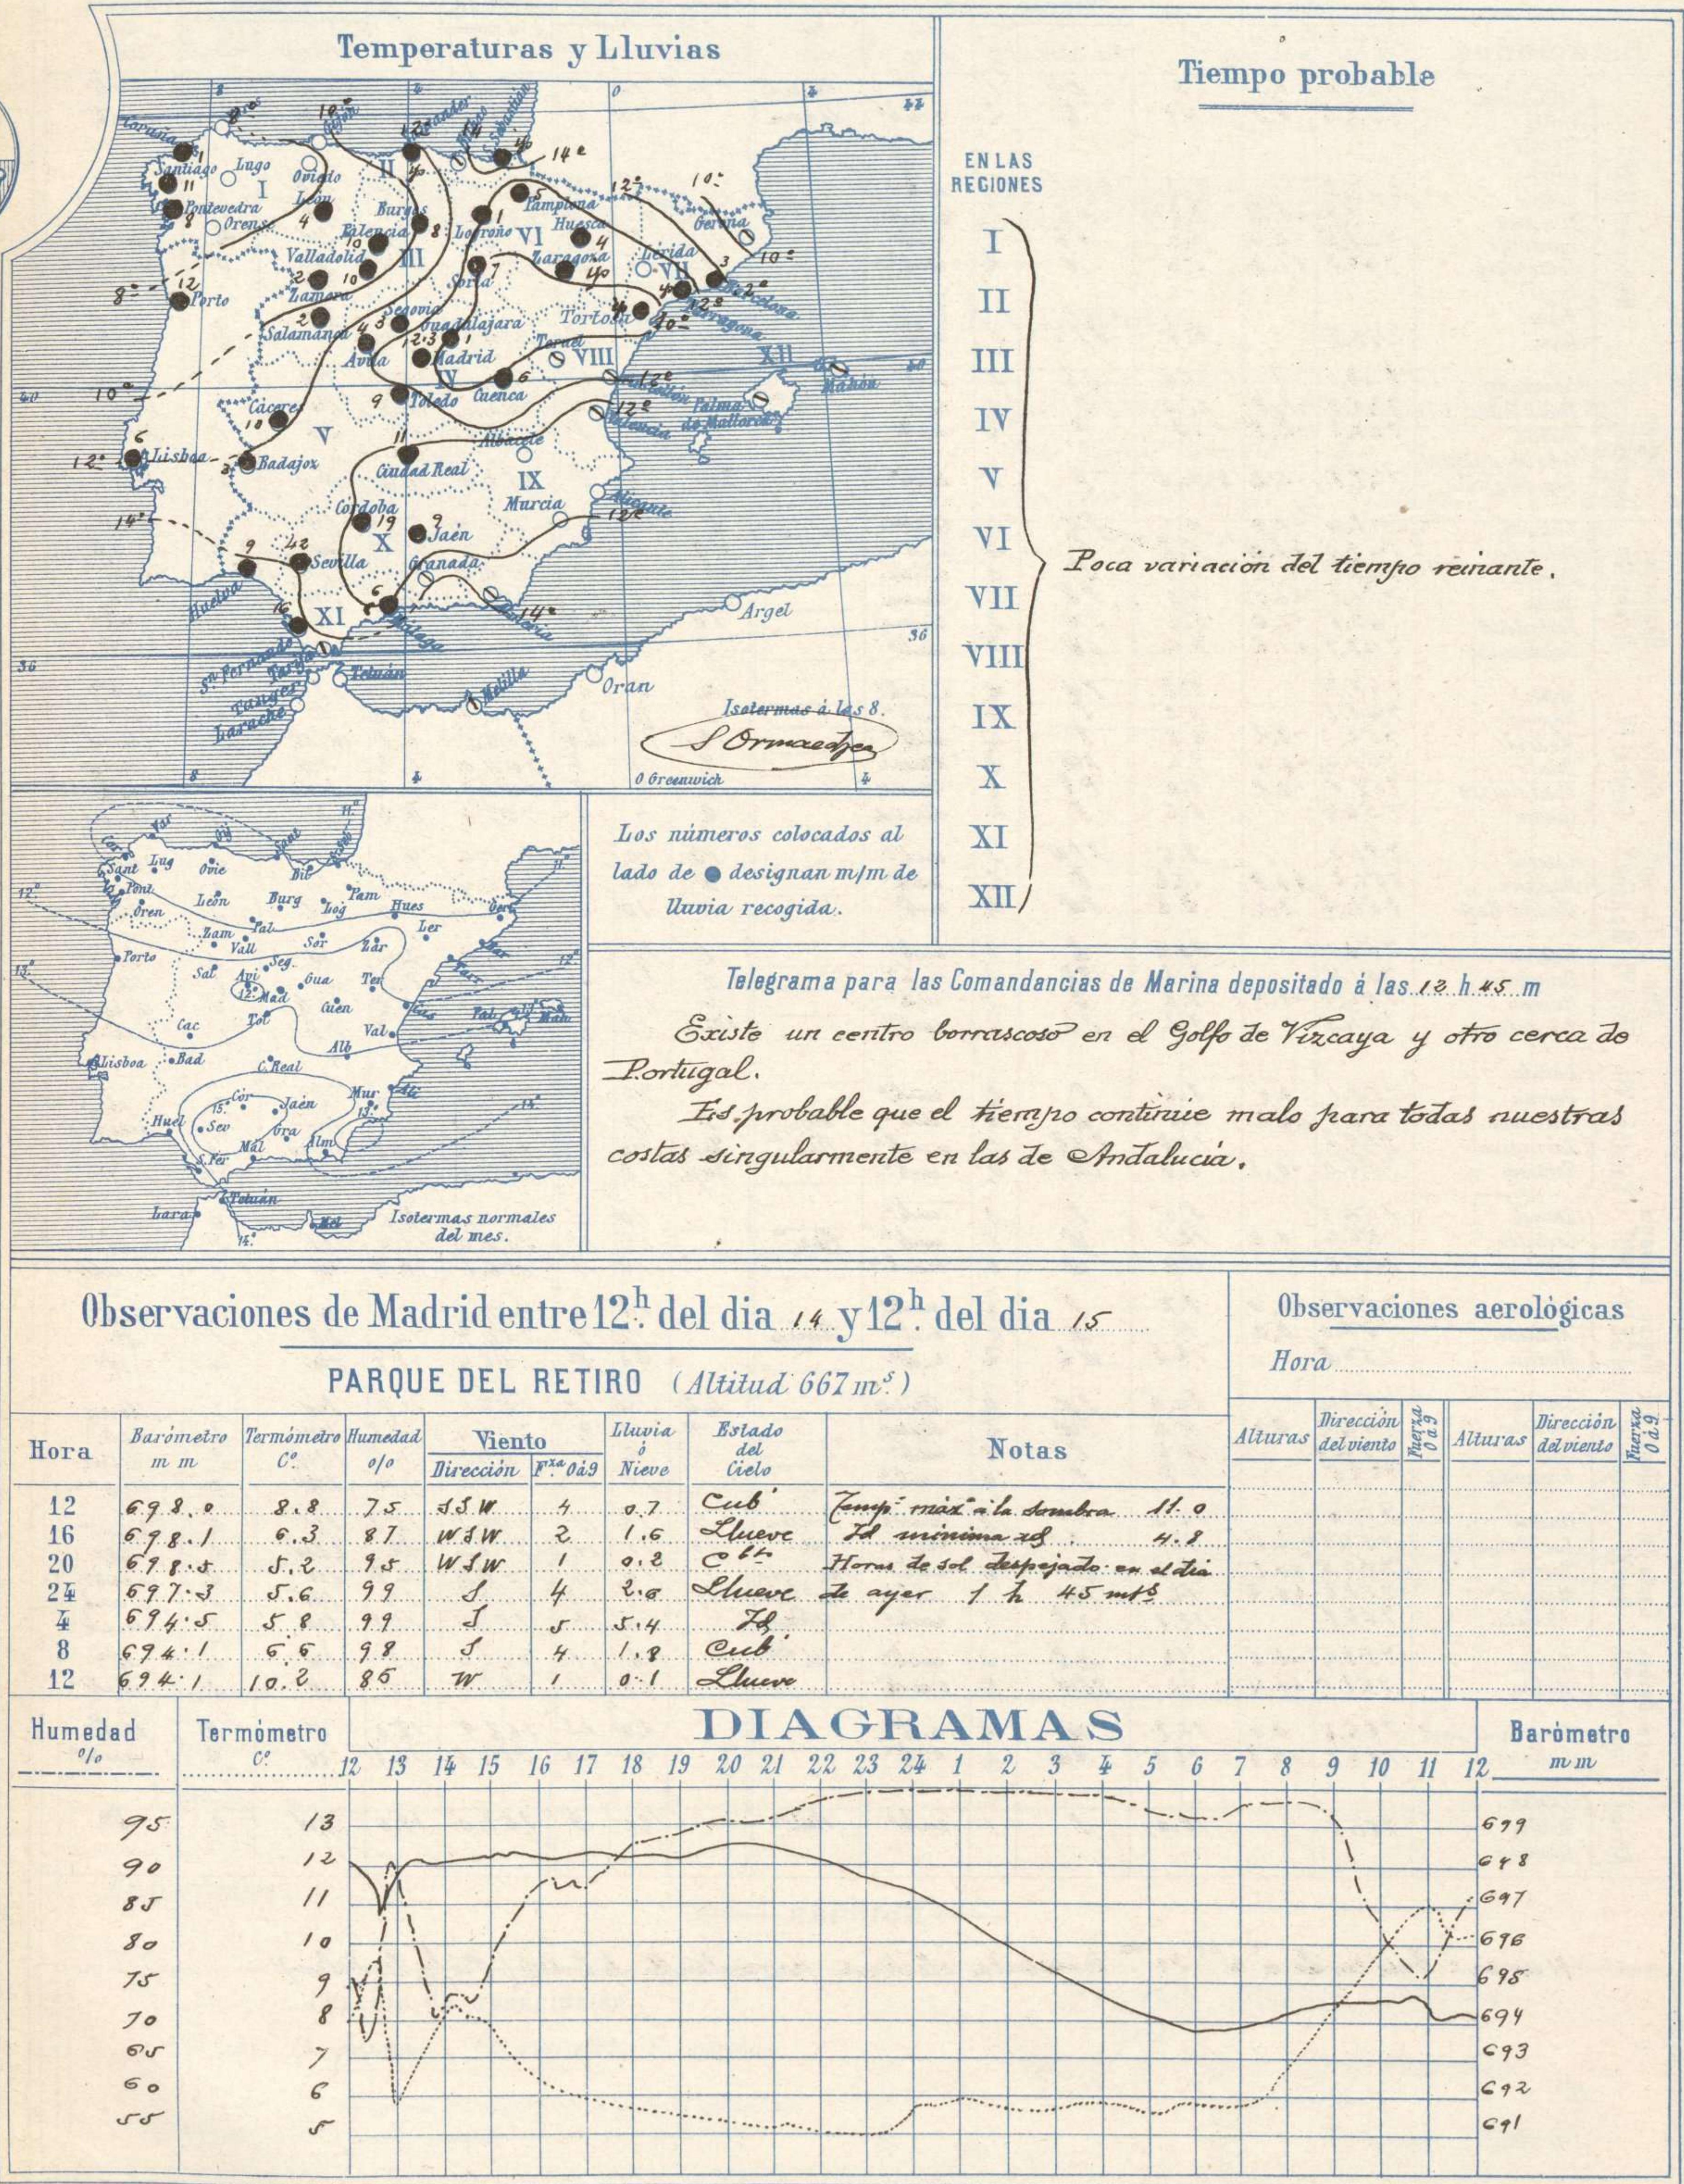

Presión atmosférica y vientos

Estado general

Faltan datos importantes para poder apreciar la extensión del trastorno atmosférico del Occidente europeo. Un centro borrascoso debe de hallarse en el golfo de Vizcaya, otro al Oeste de Portugal, un tercero en las proximidades del golfo de Cádiz y dentro de la península Ibérica, varios de muy poca consideración, pues se forman y desaparecen al poco tiempo. Todo ello origina lluvias generales sobre España, bastante copiosas en Andalucía, con vientos del Sur que adquieren importancia por su intensidad en las comarcas meridionales. El mar está agitado en el litoral andaluz.

La temperatura máxima de ayer fue de 20 grados en Murcia y la mínima de hoy ha sido de cero grados en Ávila y Segovia.
