

INSTITUTO CENTRAL METEOROLÓGICO

Boletín del Miércoles de Julio de 1901.

Año IX.

Nº 184

ESTADO GENERAL

En el centro de Francia se halla el mínimo principal que produce lluvias y mal tiempo que se extiende por todo el país. En la Mancha oriental hay otro mínimo de menor importancia, que produce algunas lluvias en Valencia y tiempo muy incierto. Llueve copiosamente con vientos fríos del N cuadrante en el Cantábrico; también ha llovido un poco en el Centro. Por lo demás el tiempo es bueno en todas partes. Baja el barómetro en los Azores. Las temperaturas son moderadas por lo general y elevadas en Andalucía y Levante. Sevilla 37°, Murcia 33°, Valencia 34°.

Tiempo probable

- EN EL N vientos bonancibles del N cuadrante y tiempo incierto.
- " NW " " " " " " buen tiempo.
- " CENTRO " flojos y bonancibles del 1º cuadrante y buen tiempo.
- " S " bonancibles del W. y buen tiempo.
- " E " " variables y tiempo incierto y tormentoso.
- " NE " " del E. buen tiempo.

Observaciones de la mañana.
