Estado General

La borrasca situada al occidente de Irlanda, tiende a penetrar en Europa. El anticiclón de las Azores se extiende hoy hasta Extremadura pero en nuestra península queda una extensa área de presiones débiles uniformes, y en ella se desarrollan a las horas de calor núcleos borrascosos secundarios, que son los que produjeron la gran nubosidad y las precipitaciones en general insignificantes observadas durante las últimas 24 horas.

Tiempo probable

EN LAS REGIONES.

Tiempo de ligeros chubascos del Noroeste.

Buen tiempo.

Observaciones en Madrid de 13^h del día 4 a 7^h del día 5
