| | | Arbolada |
| | | Muy arbolada |

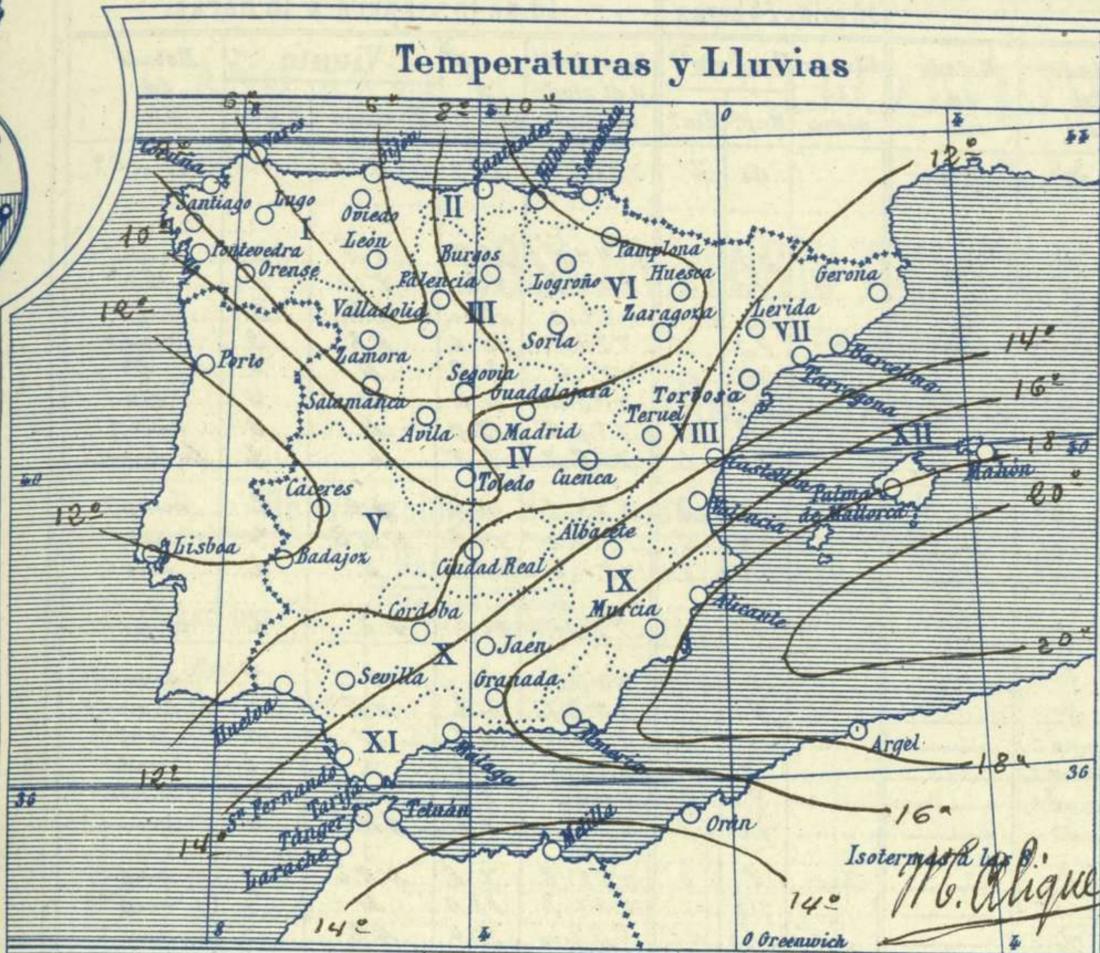

Estado general

Al Occidente de las costas de Marruecos se halla un área de presiones débiles que produce Levante en el Estrecho de Gibraltar. Las presiones altas residen sobre el Golfo de Vizcaya, formando un anticiclón bastante bien definido (715 mm) por cuyo efecto va mejorando el tiempo en toda la península Ibérica. Aun llovió ayer sobre la mitad meridional de España. Por regla general dominan los vientos del cuadrante primero. La temperatura máxima de ayer fue de 22 grados en Almería y la mínima de hoy ha sido de 2 grados bajo cero en León.

El Director general: Marqués de Teverga

El Ingeniero Geógrafo Jefe del Observatorio. J. Galbis
