ESTADO GENERAL

La depresión de Madeira sigue su marcha errática; su nivel ha bajado 9 mm y esas islas siguen las lluvias y las manifestaciones tormentosas. En la Península llueve principalmente en el Centro. Por el S.W. de Irlanda se ha presentado un mínimo algo importante que amenaza a las costas cantábricas. El tiempo se inclina a la lluvia aunque no de un modo persistente. El anticiclón ha desaparecido y las temperaturas han subido bastante.
