

La borrasca de las islas Británicas ha caminado rápidamente hacia el E. y hoy se encuentra en el mar del N. habiéndose ahondado 11 mm con vientos frescos y duros y lluvias copiosas. La depresión de la isla de Madeira permanece estacionaria. En la Península se ha extendido el mal tiempo producido por la borrasca del N. y las lluvias son bastantes generales y abundantes con vientos bonancibles del S. cuadrante; las irrobaras se desvanecen en el Mediterráneo superior donde tiende a formarse un secundario. Ha desaparecido el núcleo anticiclónico de Castilla la Nueva y las presiones más elevadas residen en el Atlántico al W. de las Azores. Suben las temperaturas un poco.

Tiempo probable

vientos bonancibles a frescos del S.º al 4.º cuadrante y lluvias. Frío.
